

800.872.4427

Home Health is the service that provides intermittent visits by nurses and therapists to the client in his own home. Visits occur as a means to instruct, educate and train the client or his caregiver to maintain or gain optimal health, well-being and independence.

Nursing Services:

Most home health clients only require nursing for initial education, ongoing assessments, coordination and communication with physicians regarding progress or client needs. A few examples follow.

- Client and Family Education
- Assessments
- Lab Draws
- Anti-coagulant Therapy
- Asthma Education
- Diabetic Education
- Wound Care
- Tube Feedings
- Enterostomal Care
- Bowel Program
- Pulmonary Support Services
 - Ventilator Care
 - Oxygen Therapy
 - Tracheostomy Care
 - BiPAP or CPAP
 - Inhalation Therapy
- Infusion Therapy Services
 - Total Parenteral Nutrition (TPN)
 - Antibiotic Therapy
 - Fluid Therapy for Hydration
 - Chemotherapy
 - Pain Management
 - Inotropic Therapy
 - Specialty Medications (Enzyme replacement, immunotherapy, steroids, etc.)
- Physical Therapy
